

Features

- Switch mode power supplies for DIN-rail mounting
- 4 power ranges with 3, 6, 12 and 24 A output current (24 VDC models)
- Selectable 115/ 230 VAC input
- Very low ripple and noise
- EMI complies with EN50081-2 and EN50082-2
- Conducted EMI to EN55011 class B
- For system operation available with built-in functions:
 - RED:** Redundancy module for N+1 systems with true current sharing.
 - SIG:** Signal module with AC-Power-fail, DC- OK Signal and external ON/OFF control
 - UDS:** DC-UPS module for uninterruptible battery backed-up power systems.
- Worldwide Safety Approvals
- Easy snap-on mounting on DIN-rails or chassis mounting
- 2 Year Product Warranty

The switching power supplies of the TIS series have been particularly designed for applications in industrial process control systems and machine tools. Excellent specifications and high immunity against electrical disturbances guarantee reliable power for sensitive loads in rugged industrial environments. With help of optional function modules specific requirements for system applications can be met by a standard product. With the UDS module the power supplies can be extended to a perfect DC-UPS with automatic battery- backup. This function is very often required in applications where a time delayed shutdown of a system is necessary. To monitor and control the power supply a signal module can be installed. For parallel operation with active power sharing a redundancy option is available. This flexibility makes the TIS series power supplies a cost effective solution for many industrial applications.

Power Supplies with Redundancy Function

With this option a parallel operation of up to 5 units is possible. Decoupling diodes and current share lines allow to build true N + 1 redundant systems with active current sharing for all units. This function also includes an alarm relay to signal a single unit failure.

This option is available for TIS 150 W, TIS 300 W and TIS 600 W models. Please note: A combination with other options is not possible.

DC-UPS-System

In addition to the standard power supply function, these models include a professional battery management system to charge and monitor an external battery. In case of a power failure the battery is switched automatically and without any interruption to the DC-output. If mains power is available again, the battery is switched off. The hold-up time is limited only by battery capacity and load. Charge current and voltage can be adjusted to values as required by battery type. Power fail and low battery alarm signals

are available via two independent relay contacts. During normal operation the battery status is monitored by periodically loading the battery for short time. If a cell resistance is high, there is a relay alarm available. The battery is fully protected under any operational conditions. The power supply is short circuit protected even in battery-backup operation, however for safety reason the battery should be fused with a fast blow fuse. Battery mode can be activated by connection of Pin 7 and 8.

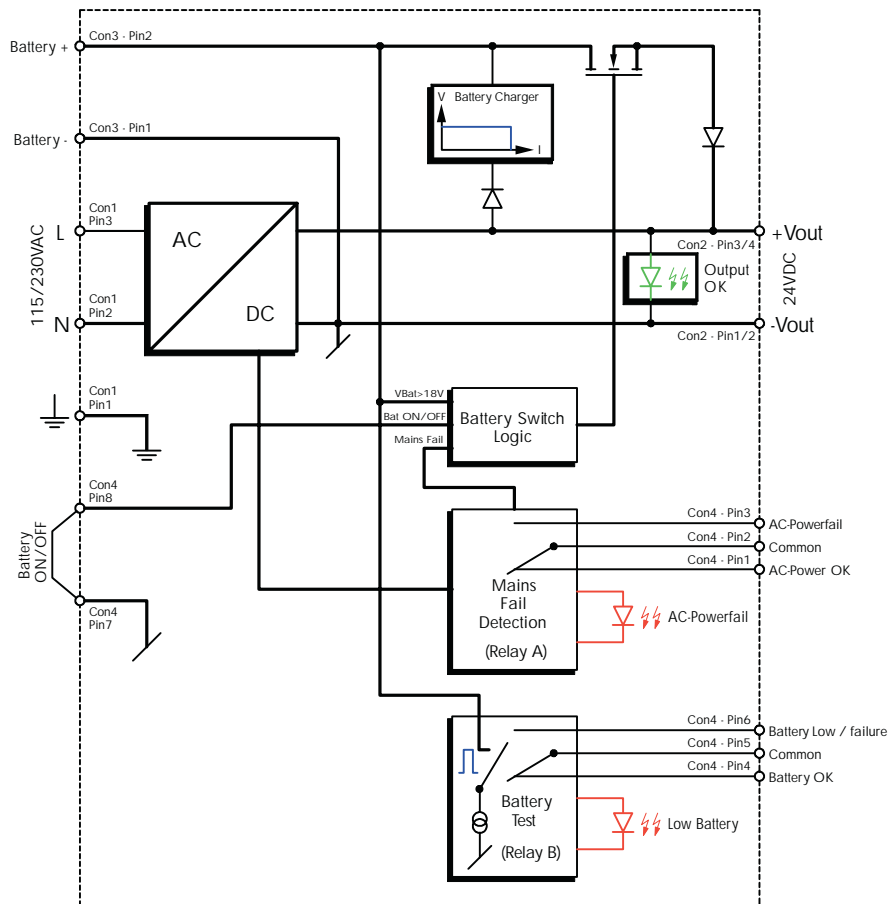

Complete external battery modules (3.2 Ah or 7 Ah standard) with lead batteries are available on request.

Battery-Pack for DC-UPS Systems

The Battery Pack contains high quality, maintenance free lead-acid batteries with 3.2 Ah resp. 7.0 Ah capacity. The batteries are fixed together with a re-settable electronic fuse on a solid mounting frame. Together with power supply models TIS 300-124 UDS or TIS 600-124 UDS the battery pack provides a complete and reliable DC-UPS system. Backup time is depending on load current and battery capacity.
